Dear Hiring Team,

I am a Senior Software Engineer with five years of experience building backend systems and distributed infrastructure, currently based in Bengaluru and relocating to Barcelona. I am writing to express my interest in joining your engineering team, where my background in cloud-native architecture, AI and agentic systems, and large-scale production engineering can add immediate value.

Most recently, as a Founding Engineer at Knowl, I designed Python and FastAPI backend services handling over one million API requests per day, deployed on a hybrid AWS EC2 and GKE architecture. I implemented Redis-based rate limiting for P95 stability, built Pydantic-validated REST APIs in a reactive microservice architecture, and delivered an autonomous AI agentic system that improved language detection accuracy by 45% through LLM reasoning and multi-strategy fallback design. I also hold certifications in Retrieval-Augmented Generation (RAG) and Claude Code, and have independently built two RAG-based local AI applications using Ollama, ChromaDB, and Sentence Transformers.

Prior to that, I spent over four years at VMware and Arista on their VeloCloud SD-WAN platform, working in production C and C++ on systems serving 200,000 plus edge devices. I built network interface tracking with kernel-level data extraction, delivered Advanced Threat Protection with IDS/IPS and URL filtering that mitigated 10,000 plus monthly malicious connection attempts, and introduced a unit testing framework that scaled code coverage from 5% to 90% and enabled full CI automation. This combination of systems-level depth and cloud-native breadth is relatively rare, and I have found it particularly valuable when tackling problems that span infrastructure and application layers.

My core stack includes Python, TypeScript, FastAPI, Flask, Node.js, Docker, Kubernetes, KEDA, Terraform, AWS (EC2, S3, SQS), GKE, PostgreSQL, Redis, MongoDB, and Elasticsearch. I am comfortable leading technical decisions, mentoring engineers, and defining API contracts and standards across teams. I hold a B.Tech in Computer Science from IIT Guwahati and have maintained Codeforces Expert and CodeChef 4-star rankings.

On relocation, I am committed to moving to Spain and am actively pursuing engineering roles in Barcelona. On work authorization, I can self-process Spain's Digital Nomad Visa, so employer sponsorship is welcome where it is available but is not a prerequisite for me to join your team. I am ready to relocate on a timeline that suits the role, and am currently learning Spanish with a commitment to reaching professional proficiency.

I would welcome the opportunity to discuss how my experience aligns with your team's goals. Thank you for your time and consideration.

Warm regards,

Abhishek Jaiswal
